Manuscripts in Submission

[Disentangling Social Capital: Lab-in-the-Field Evidence on Coordination, Cooperation and Networks](#) (Job Market paper). In 2008, I conducted and designed an artefactual field experiment in which 714 beneficiaries of a Conditional Cash Transfer (CCT) program in Colombia took part in a ‘Weak-link’ Coordination game and Public Goods game with communication. I examine the role of the program on the ability to coordinate, by accounting for different dimensions of social capital: cooperation is an individual other-regarding preference; social norms stem from beliefs about others’ behavior; and individual connections arising in networks allow us to build such beliefs. I estimate a structural choice model of the individual decision to coordinate, which highlights the role of beliefs about others’ behavior: high effort is only sustained under high beliefs. The regressions suggest that the CCT program helps overcome the coordination failure through different channels, and the structural model points to the beliefs channel.

[Prosocial behavior, Heterogeneity and Incentives: Experimental evidence from the local commons in Colombia](#). I examine efficiency of incentives according to the composition of social preferences’ types in the groups with 1095 participants.

[Work pays: different benefits of a workfare program in Colombia](#). With Orazio Attanasio, Costas Meguir (Yale University), Marcos Vera-Hernandez (UCL) and Arthur Alik (University of Toulouse). We examine the effects of a workfare program in Colombia by using different econometric methods.

[Identification of Other-Regarding Preferences: Evidence from a Common Pool Resource Game in Colombia](#). With David Echeverry (University of California Berkeley). We identify individuals’ types by using a structural latent class model and compare the results with the structural parameters estimated from a Quantal

Response Equilibrium model. We use a sample of 935 individuals (students and Common Pool Resource real users)

Manuscripts in Preparation

Leading by non-example: do leader's social preferences matter for cooperation? Experimental evidence from Colombia.

In 2014, I conducted an artefactual field experiment with 500 beneficiaries of a CCT in Colombia and examine whether how powerful leaders are determines their decision to free ride and the relationship between individual willingness to cooperate and the presence of an empowered leader in the group.

Darwin in the experimental lab: between and within group competition effects on human behavior.

I examine the effect of between group and within group competition by using a Public Goods game we conducted in 2007 with the sample of Cardenas, et al. 2008 (above)

Parental generosity and early child development: an experimental approach.

I designed an economic experiment to measure parents' willingness to invest in their children's human capital.

Are Public Officials Less Pro-Social? An Artefactual Field Experiment in Colombia. With Natalia Candelo, Juan Camilo Cardenas, Alejandro Gaviria.

Helping the Helpers: Altruism as A Rational Choice of Donors to A Students Voluntary Organization. With Juan Camilo Cárdenas and Miguel Espinosa 2009. Working paper CEDE (30). University of Los Andes.

Pasos metodológicos de un diseño experimental para medir capital social y acción colectiva en seis ciudades latinoamericanas [Methodological steps for an experimental design to measure social capital and collective action in six Latinamerican cities] With Natalia Candelo. 2008. Working paper CEDE (17) University of Los Andes.
